Contents

1 Purpose

The purpose of this document is to define the development plan for AIPS++ release v2.0, currently scheduled for April, 2003.

2 Release priorities

The highest priority for the project in development cycle v2.0 is to continue the process of scientific integration. This includes:

1. Scientific completeness: Demonstrated end-to-end reduction capabilities for targeted instruments in all scientifically important observing and reduction modes.

2. Usability by the astronomical community: Quality of the user interface, applications presentation and user documentation.

3. Robustness, correctness and accuracy: Prove the correctness and robustness of existing capabilities and ensure comparable performance to other disk-based packages.

4. Continued deployment to an expanded user base: Continue to increase the scientific user base for AIPS++.

Maintaining a sound infrastructure in the project is important however, and infrastructure work has been scheduled for this cycle carefully; primarily in areas which are vital for the long-term vitality of the project, or which are in the critical path for application development.

3 <u>Introduction</u>

Development targets are listed in hierarchical form in a work breakdown structure, given below, which defines all targets in the v2.0 plan. The top-level targets are divided between scientific completeness, usability improvements, operations and management, in line with the release objectives listed above. The high-level targets are divided into sub-targets to achieve an average low-level target granularity of no longer than a few weeks. The list of consortium developers who appear in the plan at any level are listed below; note that individual developers may be available to the project for very different allocations of time, as enumerated in detail in the v2.0 plan below.

NAME: Release v2.0 (April 2003)
ID:   2.0

DESCRIPTION: AIPS++ release v2.0

ASSIGNED: PM, 2002-07-01 to 2003-03-31
          39 weeks less 3.8 weeks vacation = 35 weeks
          Defects and user support at 30%.
          One week converted at 40 hours per week.

          Fraction   Development    User support/defects
          ----------------------------------------------
          100%       980 h            420 h
           75%       740 h            320 h

1.1.3.1 msconcat: support variable-shaped and fixed-shape TSM 80 hrs
Daniel Goscha 80 hrs
1.1.3.2 msconcat: support variable-shaped spectral windows 120 hrs
Daniel Goscha 120 hrs
1.1.3.3 msconcat: accept frequency and position tolerance as input
20 hrs
Kumar Golap 20 hrs
1.1.4 MS GAIN sub-table  110 hrs
1.1.4.1 Define MS GAIN sub-table format 30 hrs
George Moellenbrock 30 hrs
1.1.4.2 Process MS GAIN change proposal 40 hrs
Athol Kemball 40 hrs
1.1.4.3 MSGain access classes 40 hrs
Mark Wieringa 40 hrs
1.1.5 Improved multi-MS support in MS access classes 80 hrs
Athol Kemball 80 hrs
1.1.6 Heterogeneous spectral window support 240 hrs
1.1.6.1 Variable-shaped spw. support in ms2archive 120 hrs
Daniel Goscha 120 hrs
1.1.6.2 Variable-shaped spw. support in archive2ms 120 hrs
Daniel Goscha 120 hrs
1.1.7 Generic SDFITS improvements 80 hrs
1.1.7.1 Resolve SDFITS conventions with CLASS 80 hrs
Bob Garwood 80 hrs
